

CRITICALCONTROL RELEASES PROSTREAM

CALGARY, AB, March 29, 2010 – CriticalControl Solutions Corp., (TSX: CCZ) is pleased to announce the launch of ProStream, a comprehensive consolidated gas production data repository. By integrating data directly from compliant source applications, users of this service benefit from enhanced risk analysis, data gap analysis and validation of compliance with processes and controls related to safety and regulatory requirements.

Simultaneous with the launch of ProStream, CriticalControl has released ProChart, a ProStream compliant replacement for its industry leading gas chart integration application, ScanGas. All production data from gas charts integrated with ProChart is accessed through ProStream. Additionally, CriticalControl has commenced a final testing phase of ProStream for its US clients and anticipates launching ProStream in the United States by June 1, 2010.

“Over the next 90 days, we intend on transitioning all our ScanGas clients to ProChart which will result in over 500 gas producers accessing their production data through our ProStream repository,” said Alykhan Mamdani. “Our objective is to then leverage the simplicity of adding other forms of data managed by the client through different applications to ProStream to provide a single point of control for production data.”

About CriticalControl:

CriticalControl enables its clients to increase operational performance through the better control of critical business information. Through the balance of practicality, innovation and technology, we empower our clients with everything from strategies and tools, to outsourced solutions to manage information, wherever and in whatever form that information exists.
