

## **CRITICALCONTROL'S PROTREND SOLUTION HITS 100,000 METER MILESTONE**

**CALGARY, AB, July 12, 2010** – CriticalControl Solutions Corp. (TSX: CCZ) ("CriticalControl" or the "Corporation") is pleased to announce that it has achieved a key milestone in the penetration of its industry leading fluid composition management application, ProTrend. As of July 7, 2010 there are over 100,000 active meters on the ProTrend system.

ProTrend is a technology and service based solution for gas producers to schedule fluid sampling at the wellsite with laboratory service providers, manage resulting fluid analysis and ensure compliance with regulations governing sampling. Composition results from laboratory service providers are sent directly to CriticalControl, validated with ProTrend, and integrated into the different applications within a producer, joint venture partners and downstream plant operators.

"ProTrend enables the streamlined collaboration of an essential component of gas production data, reducing duplication and potential liability due to allocation of revenue based on incorrect fluid composition," said Alykhan Mamdani, President and CEO of CriticalControl. "In order to have ProTrend recognized as the industry standard in Canada, the penetration of ProTrend into 100,000 active meters was a key objective of the company in 2010."

### **About CriticalControl:**

CriticalControl enables its clients to increase operational performance through the better control of critical business information. Integrating technology with labour intensive processes of imaging and data entry, CriticalControl empowers its clients to increase their competitiveness, reduce operating expenses and improve margins.
